

WHAT IF...

THE UNITED STATES WAS FORCED
TO PAY EU ENERGY PRICES?

Today, America has a huge economic advantage over other nations:
Affordable, reliable and domestic energy supplies.

But some politicians and interest groups want to surrender that
advantage. Through restrictive environmental mandates and
anti-development policies, they want to make the United States more
like Europe, where energy prices are much higher.

What would this mean for the U.S. economy? We decided to find out.

BELIEVE IT OR NOT, SOME U.S. OFFICIALS THINK IT'S A GREAT IDEA...

“I think we should look to countries like Denmark, like Sweden and Norway,
and learn from what they have accomplished.”

Bernie Sanders
Former Presidential Candidate (D-VT)

“Somehow we have to figure out how to boost the price of gasoline to
the levels in Europe.”

Steven Chu
Former Obama Energy Secretary

“The easiest thing to do is raise the price of fossil fuels. If that had been
done decades ago in the U.S., it would look more like Denmark.”

Bill McKibben
Environmental activist & DNC platform committee member

OUR NEW REPORT SHOWS EUROPEAN ENERGY POLICIES AND PRICES WOULD **COST** AMERICA:

7.7 MILLION

JOBS

\$676 BILLION

IN ANNUAL GDP

\$4,800

PER HOUSEHOLD
